Ticket Information

Ticket ID	LAB-001
Date	May 30, 2026
Technician	Cannon Ozongwu
Category	Endpoint Compliance / Intune
Priority	Medium
Status	Resolved

Ticket Summary

The user's device was flagged as non-compliant in Microsoft Intune due to BitLocker encryption not being enabled. The compliance policy “Lab - BitLocker Required” was assigned to all users, and the affected device appeared in the Intune admin center with a Non-compliant status, triggering this ticket.

Environment

Tenant	CannonITLab.onmicrosoft.com
Device	INTUNE-LAB-WIN11
OS	Windows 11 Enterprise
MDM	Microsoft Intune
Policy	Lab - BitLocker Required

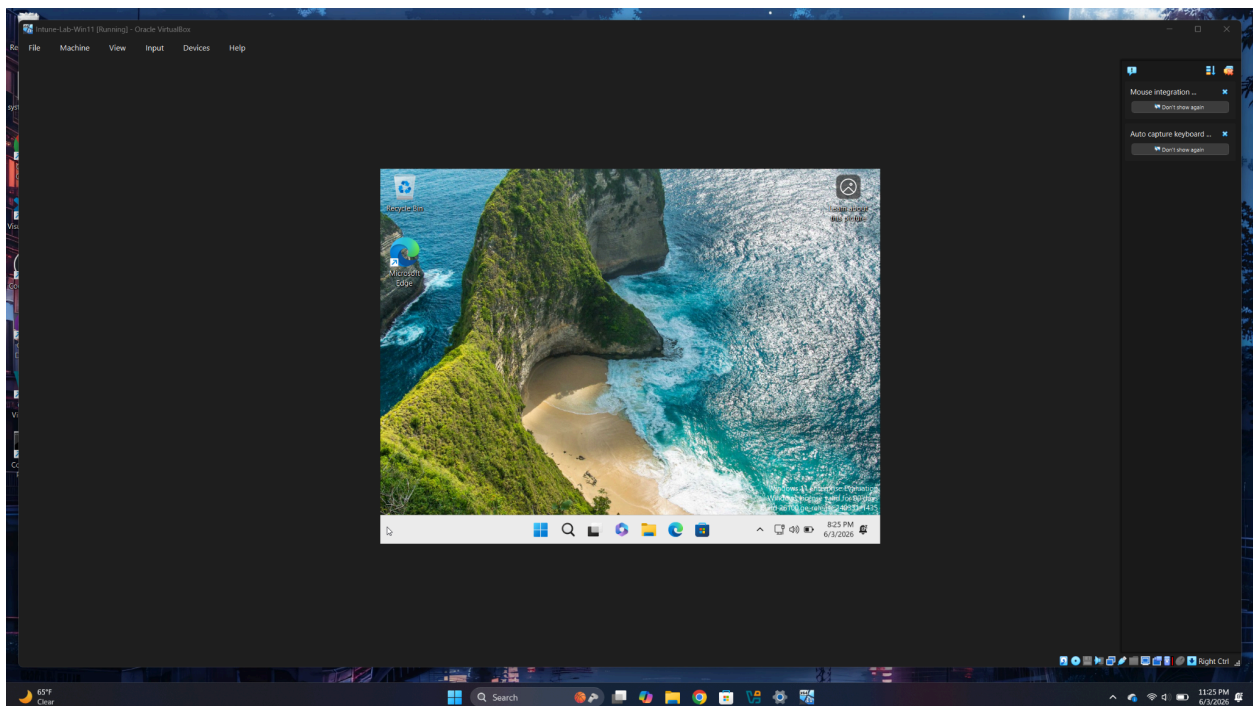

Steps Taken

1. Logged into intune.microsoft.com and navigated to Devices > Compliance

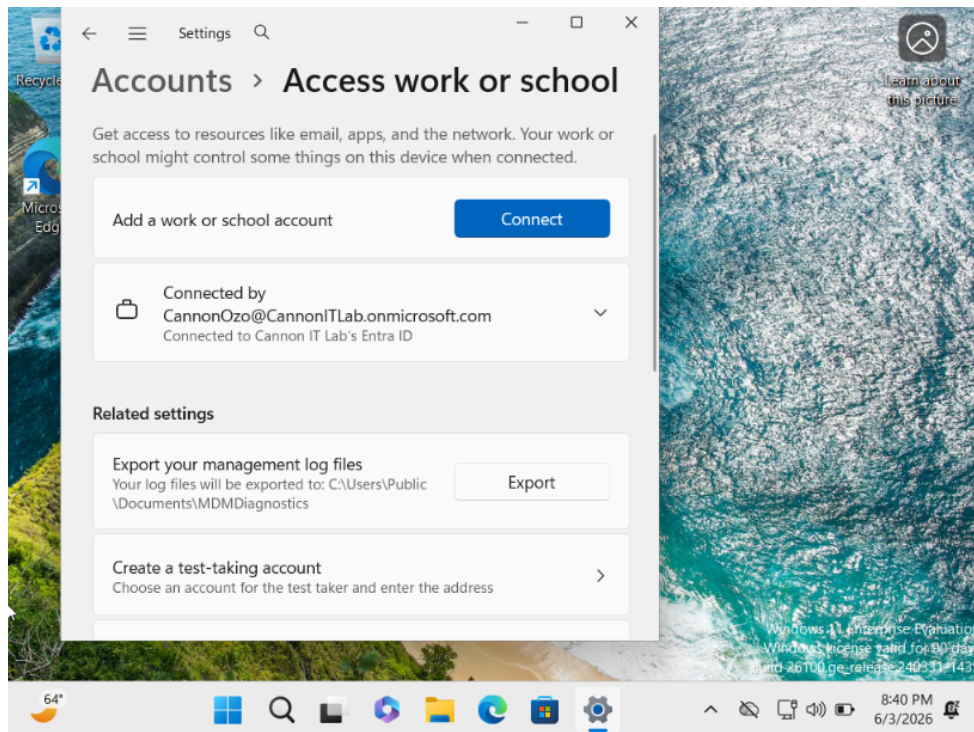

2. Created a new compliance policy named “Lab - BitLocker Required” targeting Windows 10 and later.
3. Under Device Health, configured Require BitLocker to Require.
4. Assigned the policy to All Users and saved.
5. Navigated to Devices > Enrollment > Automatic Enrollment and identified MDM user scope was set to None — updated it to All to enable auto-enrollment.
6. Confirmed policy deployed successfully and reviewed the policy properties page.
7. In an actual environment, the next step would be to RDP into the non-compliant device, run `manage-bde -status C:` to confirm BitLocker is off, enable BitLocker via Control Panel, and trigger a manual sync in Intune to restore compliance.

4. Intune compliance policy — BitLocker set to Require under Device Health

The screenshot displays the Microsoft Intune admin center interface. On the left is a navigation pane with links to Home, Dashboard, All services, Explorer, Devices, Apps, Endpoint security, Agents, Reports, Users, Groups, Tenant administration, and Troubleshooting + support. The main content area shows the breadcrumb path Home > Devices | Compliance. The title is "Windows 10/11 compliance policy" with a sub-header "Windows 10 and later". Below the title are five tabs: Basics (checked), Compliance settings (checked and active), Actions for noncompliance, Assignments, and Review + create. The "Compliance settings" tab is expanded, showing sections for Custom Compliance, Device Health, and several other categories. Under "Device Health", there is a section for "Microsoft Attestation Service evaluation settings" with a link to "Learn more". Below this, under "Windows 10 and 11", there are three settings: BitLocker, Secure Boot, and Code integrity. Each setting has a toggle switch. BitLocker is set to "Require" (purple bar). Secure Boot and Code integrity are set to "Not configured" (blue bar).

6. Lab - BitLocker Required policy properties page showing assignment and configuration

The screenshot shows the Microsoft Intune admin center interface. The left sidebar contains navigation links: Home, Dashboard, All services, Explorer, Devices, Apps, Endpoint security, Agents, Reports, Users, Groups, Tenant administration, and Troubleshooting + support. The main content area is titled 'Lab - BitLocker Required' and shows the 'Properties' tab for a compliance policy. The policy is for 'Windows 10 and later' and requires BitLocker encryption on all managed devices. The 'Device Health' section shows 'Bitlocker' as 'Required'. The 'Actions for noncompliance' section shows a table with one action: 'Mark device noncompliant' with a schedule of 'Immediately' and no additional recipients. The 'Included groups' section shows a table with one group: 'All Users' with a filter of 'None' and a filter mode of 'None'. The 'Excluded groups' section shows 'No results'.

Resolution

Compliance policy was successfully created and deployed to all users in the tenant. The MDM user scope misconfiguration was identified and corrected during troubleshooting. In an actual environment, the process would involve enabling BitLocker on the affected endpoint and confirming the device returns to a Compliant status in Intune following a manual sync.

Notes & Lessons Learned

MDM auto-enrollment was initially blocked because the MDM user scope in Intune was set to None. Changing this to All is a required configuration step before a device can fully enroll. This is a common misconfiguration in new Intune tenants and would be a first checkpoint when troubleshooting enrollment failures in a real help desk environment.
