

# IT Help Desk– Ticket Documentation

Home Lab Portfolio Project | Cannon Ozongwu

## Ticket Information

|            |                                    |
|------------|------------------------------------|
| Ticket ID  | LAB-003                            |
| Date       | June 1st, 2026                     |
| Technician | Cannon Ozongwu                     |
| Category   | Account Reset / BitLocker Recovery |
| Priority   | High                               |
| Status     | Resolved                           |

## Ticket Summary

The User reported being locked out of their device and unable to recall their BitLocker recovery key. I retrieved the BitLocker recovery key from Microsoft Intune, allowing the user to regain access to their device. BitLocker was manually enabled on the endpoint and the recovery key was documented.

## Environment

|        |                                              |
|--------|----------------------------------------------|
| Tenant | CannonITLab.onmicrosoft.com                  |
| Device | INTUNE-LAB-WIN11                             |
| OS     | Windows 11 Enterprise                        |
| MDM    | Microsoft Intune                             |
| Policy | BitLocker Recovery Key via Intune / Entra ID |

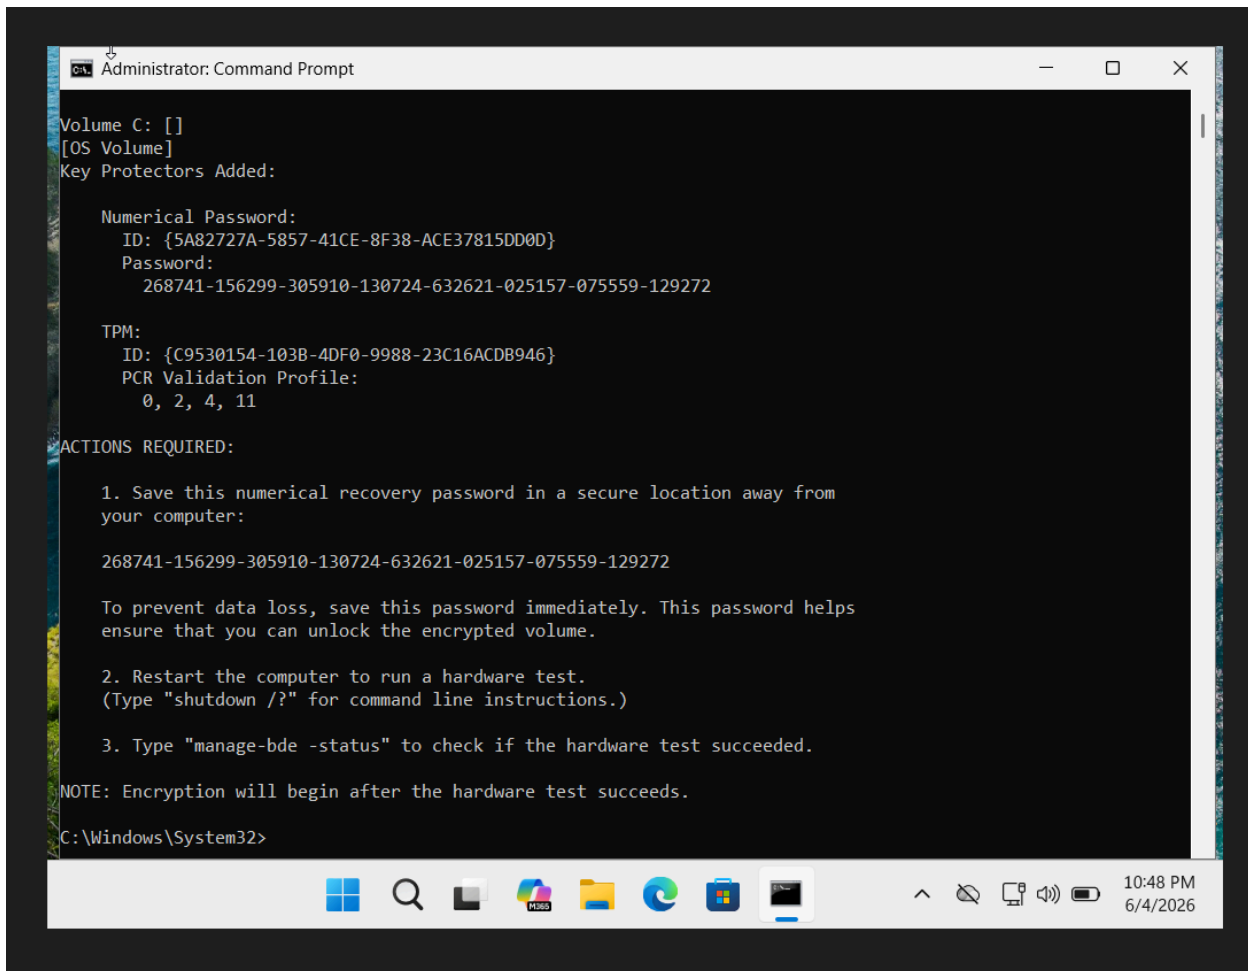

## Steps Taken

1. Received ticket from user reporting BitLocker recovery screen on device startup.

2. Verified user identity before proceeding with key retrieval.
3. Logged into intune.microsoft.com and navigated to Devices > All devices.
4. Located the affected device and clicked into the device details.
5. Selected Recovery keys from the device menu.
6. Enabled BitLocker on the endpoint using “manage-bde -on C: -recoverypassword” in an elevated command prompt.
7. Documented the generated recovery key ID and password for audit purposes.
8. Attempted to escrow the recovery key to Entra ID via PowerShell — process was blocked due to VM lacking a physical TPM.
9. Confirmed user understood the recovery process and closed the ticket.

## Screenshots

1. CMD output showing BitLocker enabled with recovery key generated

## 2. Intune Recovery keys page for the affected device

The screenshot displays the Microsoft Intune admin center interface. On the left is a navigation pane with categories like Home, Dashboard, All services, Explorer, Devices, Apps, Endpoint security, Agents, Reports, Users, Groups, Tenant administration, and Troubleshooting + support. The main area shows the breadcrumb path: All services > Devices | All devices > DESKTOP-4NVVU61. Below this is the title 'DESKTOP-4NVVU61 | Recovery keys' with a lock icon and a menu icon. A search bar and a 'Got feedback?' link are also present. A left-hand menu for the device includes Overview, Manage (Properties), Monitor (Device inventory, All apps, Hardware, Discovered apps, Device compliance, Device configuration, App configuration), and Recovery keys (which is selected). The Recovery keys section contains a sub-menu with User experience, Group membership, Managed Apps, Filter evaluation, Enrollment, and Remediations (preview). The main content area features a table with columns: BitLocker Key Id, BitLocker Recovery Key, and Drive Type. The table contains a single row with the text: 'No BitLocker recovery key found for this device'.

| No BitLocker recovery key found for this device |                        |            |

### 3. Entra ID device page showing device details

The screenshot displays the Microsoft Entra admin center interface. The left-hand navigation pane includes sections for Home, Security Copilot agents, Security Copilot chat, Favorites, and a list of Entra ID features such as Overview, Users, Groups, Devices, Agents, Enterprise apps, App registrations, Roles & admins, Delegated admin partners, Tenant governance (Preview), Domain services, Conditional Access, Multifactor authentication, Identity Secure Score, and Authentication methods. The main content area shows the breadcrumb path: Home > Account Recovery > Overview > Devices | All devices. Below this, the title bar reads 'DESKTOP-4NVVU61 | Properties'. A 'Manage' section contains links for Enable, Disable, Delete, and a Manage icon, along with a 'Got feedback?' link. The 'Properties' tab is active, showing a list of attributes for the device. A 'Copy to clipboard' tooltip is visible over the Name field.

## Resolution

BitLocker was successfully enabled on the endpoint and the recovery key was documented. The Intune Recovery keys portal was used to demonstrate the standard key retrieval process a technician might follow in an actual environment. The TPM limitation in the VM environment prevented automatic key escrow to Entra ID, this would not occur on a physical device enrolled in Intune.

## Notes & Lessons Learned

BitLocker recovery keys are automatically escrowed to Entra ID during device enrollment and are retrievable by a help desk technician directly from the Intune portal under Devices > device > Recovery keys. Identity verification of the user should always be completed before releasing a recovery key. The VM used in this lab doesn't have a physical TPM which prevented automatic key escrow. This would not apply to physical endpoints in a real deployment.
